

Illustrating the Links between Food and HIV: Call for Stories of How Access to Food Contributes to Decisions Regarding Comprehensive Treatment of HIV

Remark: The approximate size of the expected reply is indicated for each question. You may add appendices, and refer to them in this form. This form, once filled in, should not exceed five pages. We appreciate your understanding. Please fill in one form per case. Visual evidence (graphs, statistics, and pictures) is appreciated. You are free to narrate a story but the description should include the following elements:

Contact name	
Title	
Phone number	
Fax number	
E-mail address	
Country	
Region/District within country	
Title of the case/story	
Keywords (Erase to keep only the three keywords that best describe your case)	Nutritious food, social security nets, consumption needs, lack of access to land, delays in farming operations, declines in production, food aid and distribution, opportunistic infections, access to treatment, credit facilities, others (please add)
Summary of the case/story	½ a page-summarize the problem/case here
Introduction	½ a page – assess the food security situation in your country, and how people living with HIV are affected.
Context Analysis	½ a page [Give a brief review of national food security strategies and nutritional policies on food security in your country. Highlight any existing social safety nets for ensuring food security of people living with HIV]
Body of the Case Study/Story	1 ½pages: [The body should address how people make decisions regarding antiretroviral drugs intake. For example, you could highlight a story of how the food crisis in your country impacts on people living with HIV, how you or someone you know has accessed or struggled to access comprehensive HIV treatment or how a lack of access to food has increased vulnerability to HIV.] Please try to answer the following questions, where applicable: i) To what extent does food consumption influence the successful intake of ARVs? ii) What are the effects of taking ARVs without food? iii) Describe the type of food that goes with the successful intake of ARVs? iv) How does a lack of food make people more vulnerable to HIV? v) How has HIV and AIDS affected people's ability to grow and produce food?

	Visual evidence (graphs, statistics, and pictures) is appreciated.
Conclusion	1 page: Highlight clear action points to be undertaken to address the problem/protect the right to food of people living with HIV. Also identify the role of the church in supporting the food security needs of people living with HIV.
Appendices	Please list any documents that you attach to this form.
